EXP – 6

INSURANCECLAIMAUTOMATION SUITE

WORKFLOW OPTIONS USE CASE

Application	Insurance Claim Request & Processing Management
Base Form	Claim_Request_Form
Base Report	Claim_Request_Report
Platform	Zoho Creator
Experiment	EXP – 6

Aim: To build and document the automation layer for the insurance-claim process using Zoho Creator workflow options, covering form workflows, schedules, approvals, payments, blueprints, batch workflows, report workflows and functions.

1. OBJECTIVE

Theexperiment demonstrates the use of the eight Zoho Creator workflow options for automating the insuranceclaim lifecyclefrom submission to settlement.

2. WORKFLOW MAPPING

Workflow	Configuration / Purpose
Form Workflow	On_Claim_Submit_Workflow – acknowledgement and claims-team notification on form submiss
Schedule	Daily_Missing_Document_Reminder_Schedule – daily reminder for missing documents.
Approval	HighValue_Claim_Approval – approval process for high-value claims.
Payment	Claim_Settlement_Payout_Workflow – settlement payout process.
Blueprint	Claim_Lifecycle_Blueprint – controlled claim lifecycle with stages and transitions.
Batch Workflow	Bulk_Surveyor_Reconciliation_Batch – nightly batch reconciliation.
Report Workflow	OnEdit_Recalculate_Settlement_Workflow – recalculate settlement data after report edits.
Function	Generate_Settlement_Letter_Function – reusable Deluge function for settlement communicatio

Figure 1 – Form workflow action

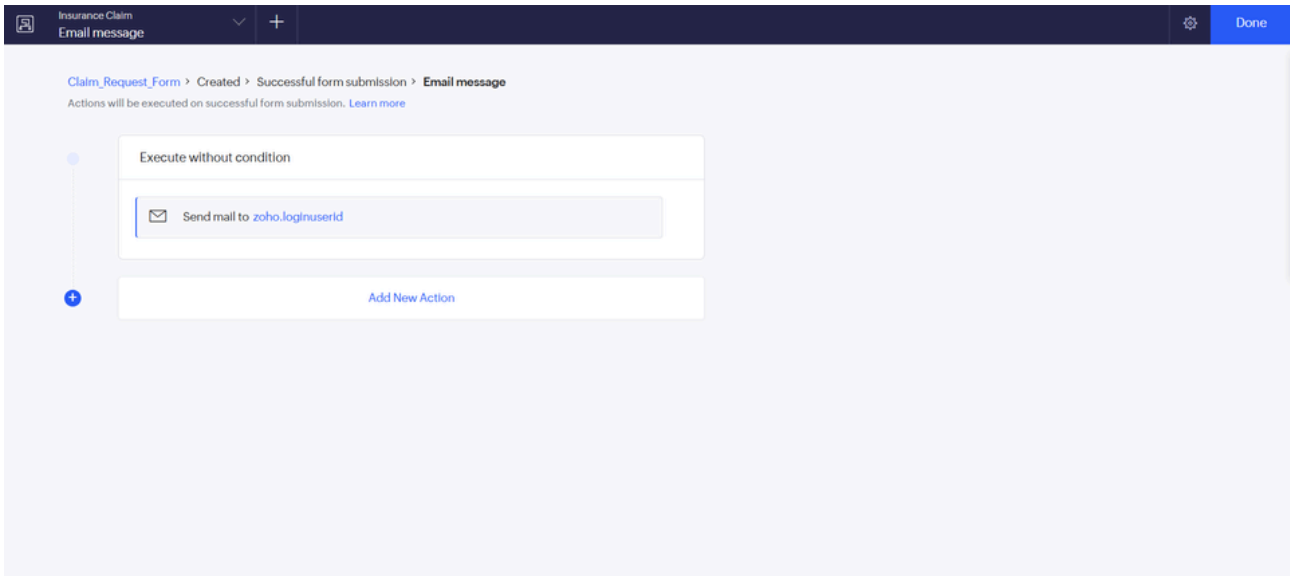

Figure 1 – Form workflow action: acknowledgement email configured for successful submission.

Figure 2 – Schedule workflow

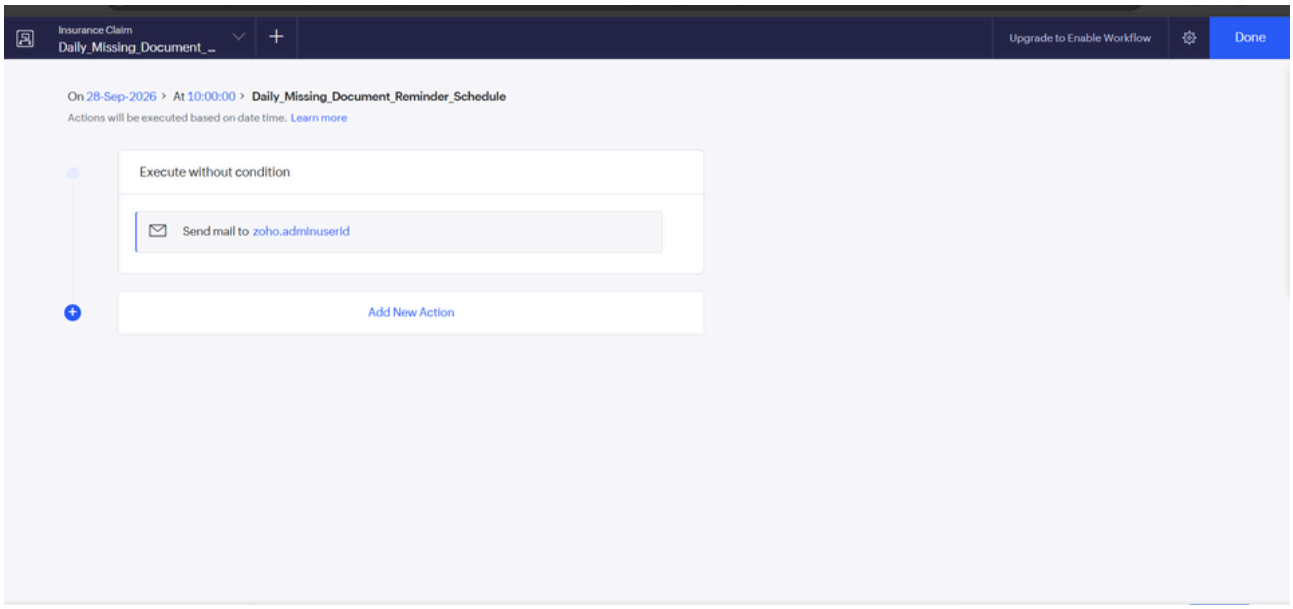

Figure 2 – Schedule workflow: Daily_Missing_Document_Reminder_Schedule configuration.

Figure 3 – Approval workflow

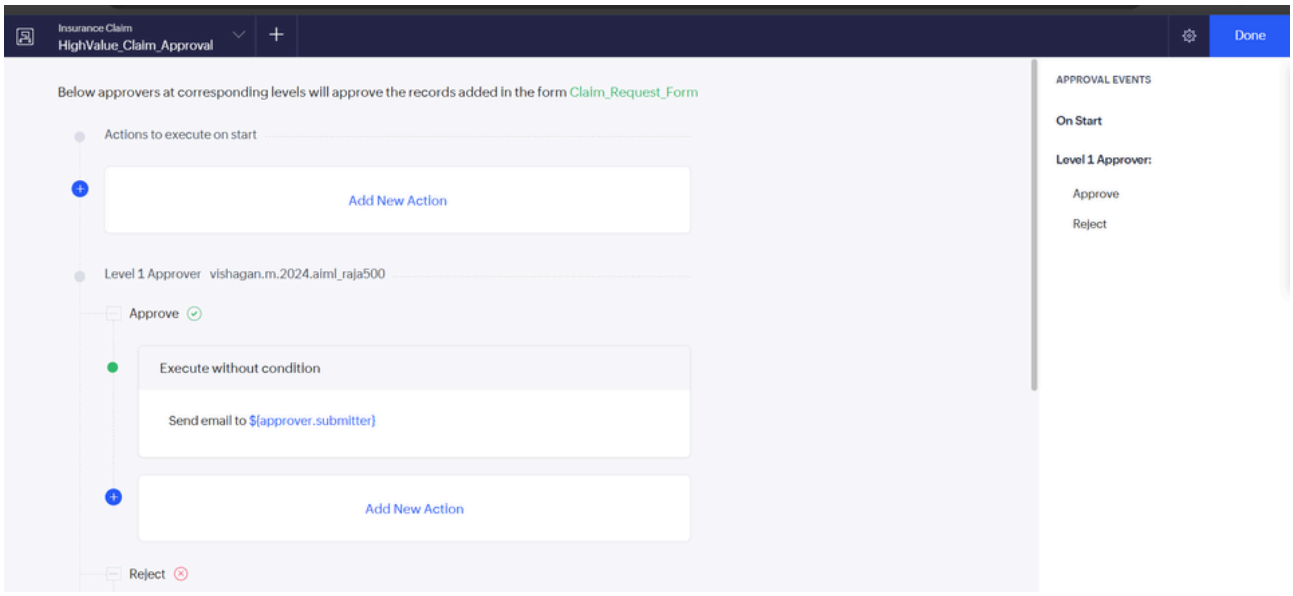

Figure 3 – Approval workflow: HighValue_Claim_Approval with approve/reject events.

Figure 4 – Blueprint

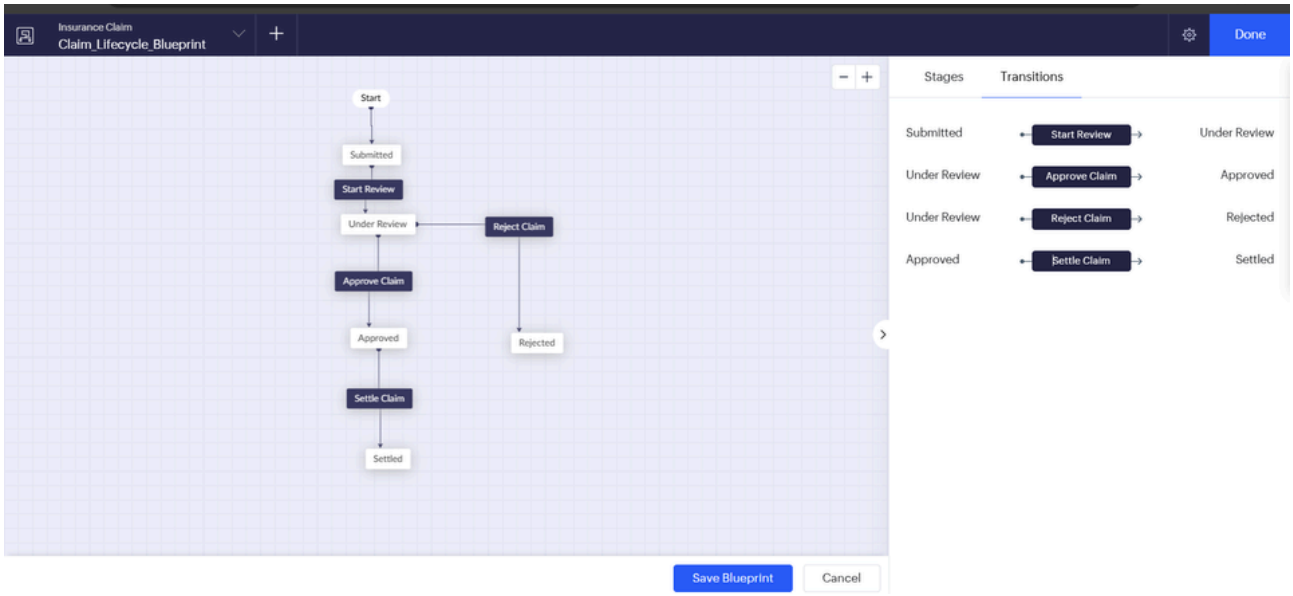

Figure 4 – Blueprint: Claim_Lifecycle_Blueprint showing stages and transitions.

Figure 5 – Batch workflow

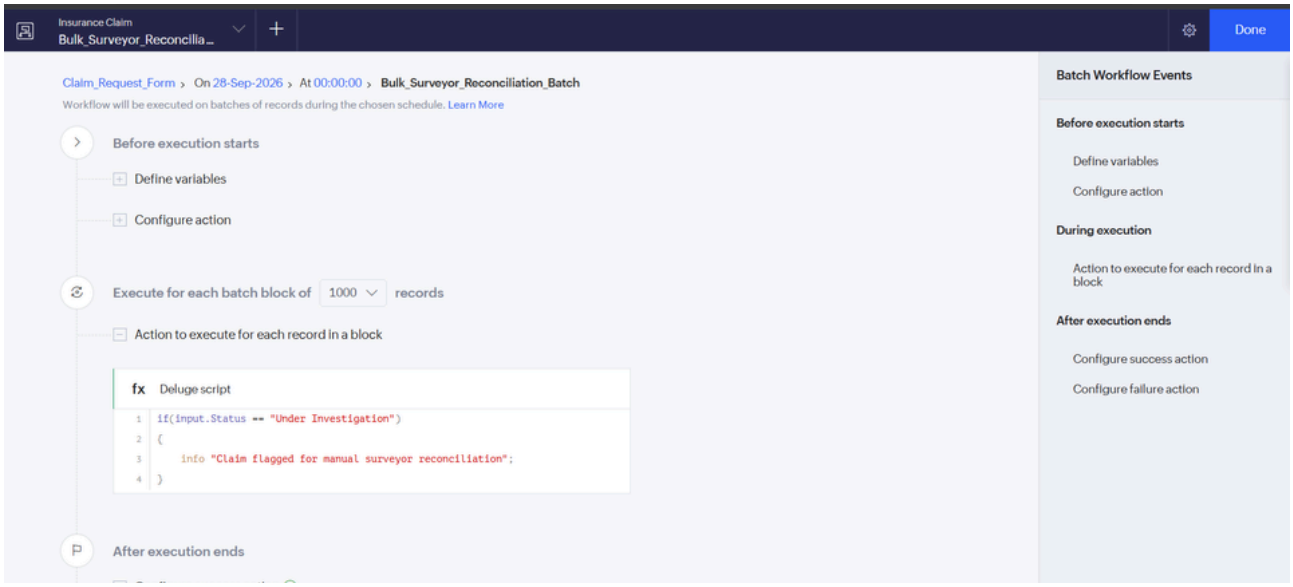

Figure 5 – Batch workflow: Bulk_Surveyor_Reconciliation_Batch with batch execution and Deluge action.

Figure 6 – Function

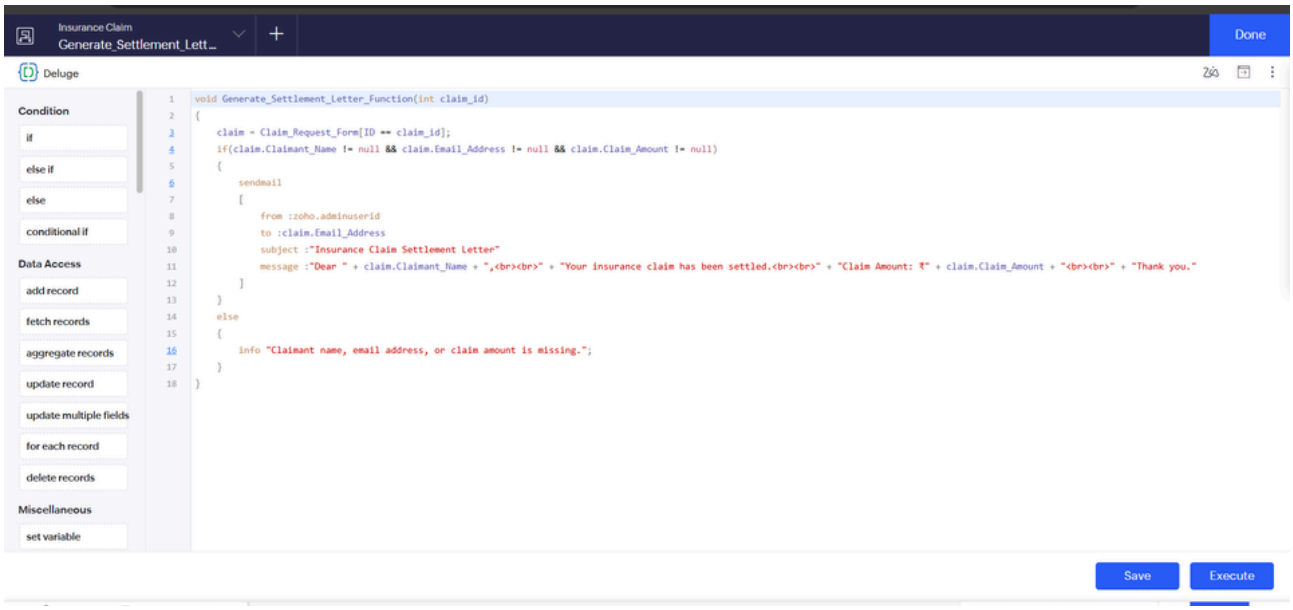

Figure 6 – Function: Generate_Settlement_Letter_Function with Deluge implementation.

3. ADDITIONAL WORKFLOW CONFIGURATIONS

Payment Workflow

Claim_Settlement_Payout_Workflow – intended to initiate the settlement payout after approval and update the settlement status after successful payment. The current Zoho Creator session displayed an expired trial, so no payment execution screenshot was included as if it had run.

Report Workflow

OnEdit_Recalculate_Settlement_Workflow – intended to recalculate the net payable amount when depreciation percentage or estimated repair cost is edited from the report. The available Workflow dashboard in the captured session did not expose a separate Report Workflows tab, so no unsupported screenshot was fabricated.

4. FUNCTION IMPLEMENTATION

ThecapturedDelugefunction uses theconfirmed fieldlinknames Claimant_Name, Email_Address, and Claim_Amount. It fetches the claim record using the supplied claim ID, validates the required fields, and sends a settlement email to the claimant.

```
void Generate_Settlement_Letter_Function(int claim_id)
{
claim = Claim_Request_Form[ID == claim_id];

if(claim.Claimant_Name != null && claim.Email_Address != null && claim.Claim_Amount != null)
{
sendmail
[
from : zoho.adminuserid
to : claim.Email_Address
subject : "Insurance Claim Settlement Letter"
message : "Dear " + claim.Claimant_Name + ",<br><br>" +
"Your insurance claim has been settled.<br><br>" +
"Claim Amount: ₹" + claim.Claim_Amount + "<br><br>" +
"Thank you."
];
}
else
{
info "Claimant name, email address, or claim amount is missing.";
}
}
```

5. RESULT

TheInsurance Claim Automation Suite was configured in Zoho Creator using the captured workflow builder screens. The documented evidence covers the form workflow, schedule, approval, blueprint, batch workflow and reusable Deluge function. Payment and report workflow evidence is recorded as unavailable in the captured session rather than inventing execution results.
